

CAPE COD DAYTIME BANDSCANS

NOTES:

Receiver = Drake R8A

S9 = approx. -60 dBm = 54 dB over zero. Receiver noise floor about S1 if preamp is on.

MFJ-1024 amplifier noise floor, when used, approx. S5 = 30 dB over zero.

x = too weak to notice at this site, or too far under dominant; ? = noted under dominant, but strength not estimated

Some of the subdominants have been identified through the use of phased antennas.

The 1997 scan following this table includes some additional stations identified through nulling of dominants.

BOLDFACE = dominant signal strength

BOLDFACE ITALIC = co-dominant signal strength

NON-BOLDFACE = subdominant signal strength (best guess)

Site 1: West Yarmouth, MA - (GC= 70.223 W / 41.682 N) - 22 JUL 2000

antenna: MFJ-1024; receiver gain normal (= preamp off)

Site 2: East Harwich, MA - (GC= 70.021 W / 41.713 N) - 16 FEB 2001

antenna: 30 m sloper to high-Z input; receiver preamp on

Site 3: Orleans, MA - (GC= 69.969 W / 41.754 N) - 17 MAR 2001

antenna: MFJ-1024; receiver gain normal (= preamp off)

Old (1997) scan below:

Daytime groundwave MW bandscan from East Harwich, Cape Cod, MA

(GC = 70.021 W / 41.713 N)

near junction Routes 137 & 39: pitch pine forest 2 km from ocean

Mark Connelly, WA1ION

The dominants on the Cape Cod list were measured at the Harwich cottage in March of 1997 with the Drake R8A connected to a 25 m sloper. Stations indicated as "subdominants" were heard at times prior to that (1994-1997). Generally, to hear subdominants, I had to use a loop, loop-versus-whip cardioid array, or two phased wires to null out the top station on a given frequency. Trips to West Dennis Beach helped fill in the details of some of the marginal daytime signals coming from the south. Positive identification of a few of the weaker Canadian Maritime area stations was facilitated by scans from eastward-facing beaches in the Cape Cod National Seashore (Nauset, Marconi).

S-meter readings (made with the Drake R8A / sloper) are usually supplied for dominants only.

For an overall merit assessment, especially of stations heard in nulls, use the 0 to 5 rating number.

Notes: A=dominant, B=co-dominant,
 C=subdominant: audible if dominant is phased or looped,
 D=audible if adjacent "slopper" is nulled,
 E=poor with only a little audio extractable
